6610 West Broad Street
Richmond, VA 23230

Principal Underwriter
Capital Brokerage Corporation
6620 West Broad Street Building 2, Richmond, VA 23230
Member FINRA

Genworth Life & Annuity and Capital Brokerage Corporation are members of Genworth Financial.

About the Product...

Variable Life is a type of insurance policy that allows the Owner to allocate premiums to one or more investment subaccounts and/or the Guarantee Account. The Owner reaps the benefit of any appreciation in value of the assets underlying the investment subaccounts while also assuming the risk of any depreciation. Each investment subaccount invests in shares of one of several portfolios, each with a specified investment objective.

RetireReady Legacy--Joint Life is a flexible premium joint and last survivor variable life insurance product, policy form P1255 4/00, not available in all states or markets. Features and benefits may vary by state. Ask your registered representative for details.

All guarantees, including death benefits, and Guarantee Account, are based on the claims-paying ability of Genworth Life & Annuity.

Portfolios
Variable life insurance products allow you to invest in portfolios that span the risk/reward spectrum. The value of a portfolio will fluctuate and, upon redemption, portfolio shares may be worth more or less than the original cost. Some portfolios are more volatile than others. Before investing, you should carefully read the applicable risk section in the portfolio prospectus.

High-yield securities portfolios are subject to greater credit risk and price fluctuations than portfolios that invest in higher-quality securities. The price yield of bond funds may fluctuate due to general market conditions and the credit quality of individual issues held in the fund. Bond prices are sensitive to interest rate changes, and a rise in interest rates will likely cause the prices of current bonds to decline. These portfolios are annotated in the tables with the superscript "H".

If you choose to invest in international portfolios, there are additional risks not associated with investing solely in the U.S. These risks include currency fluctuation, political risks, differences in accounting standards and the limited availability of information. These portfolios are annotated in the tables with the superscript "+".

Investing in real estate portfolios involves risks such as refinancing, economic conditions in the real estate industry, changes in property values, dependency on real estate management and other risks associated with a portfolio that concentrates its investments in one sector or geographic region. These portfolios are annotated in the tables with the superscript "R".

Portfolios that invest in stocks of small or emerging companies may have less liquidity than those of larger, more established companies and may be subject to greater price variability and risk than the overall stock market. These portfolios are annotated in the tables with the superscript "¶ ".

An investment in a money market portfolio is not insured or guaranteed by the FDIC or any other government agency. Although the portfolio seeks to preserve the net asset value (used to calculate portfolio share value) of your investment at $1.00 per share, it is possible to lose money by investing in the portfolio.

These investment portfolios are not available to the general public directly and are only available in variable annuity and variable life insurance products. No assurance or representation is made that the investment results of any of the product's portfolios will be comparable to the investment results of any other similar portfolio available to the general public. This is true even if the other portfolio has the same investment advisor or portfolio manager, and/or has a similar name.

Loans and Partial Surrenders
Loans and partial surrenders have the effect of reducing the death benefit and surrender value. In certain highly funded cases, variable life insurance policies may be considered Modified Endowment Contracts (MECs). In such cases, distributions will be considered taxable income to the extent that there is gain in the policy. In addition, a 10% federal penalty tax may be due on any taxable income received prior to age 59½.

Charges and Deductions
We deduct from the account value monthly administrative expenses at an annual rate of .40% (subject to a $8 monthly minimum) for all policy years and cost of insurance charges at an annual rate of .35%. In addition, a premium tax recovery charge of .20% and distribution expenses of .30% are charged annually for the 10 years following each premium payment. We also deduct from the policy value in the Separate Account a mortality and expense risk charge, computed monthly,

equal to an annual rate of .70% for the first 10 years and .35% thereafter.

Surrender Charge
The surrender charge is a percentage of the single premium paid. The maximum surrender charge is 6% of the single premium.

Policy years since premium payment	1	2	3	4	5	6	7	8+
Surrender charge	6.0%	5.5%	4.5%	3.5%	3.0%	2.0%	1.0%	0.0%

In addition, other charges such as rider charges, transfer charges, loan and partial surrender fees, and specified amount increase fees may apply.

About Past Performance...

These returns are based on the performance of Genworth Life & Annuity VL Separate Account 1 (VL Separate Account 1) investment options. Any performance that precedes the adoption date was derived by reducing the portfolio's actual performance during the period by the fees and charges that would have been imposed had the portfolio been in the policy during the period.

Performance results are calculated as if all the capital gains and dividends were reinvested. Performance results labeled "Adjusted" assume that the policy was surrendered at the end of the periods shown and reflect the deduction of a surrender charge. The surrender charge varies by the policy years since any purchase payment as described in the Surrender Charge section. Performance results labeled "Unadjusted" are calculated at the end of the period shown but do not deduct surrender charges.

VL Separate Account 1 average annual compounded total return figures are calculated at the end of the periods shown, unless a portfolio was not available in the Separate Account during those periods.

Adjusted Performance
Adjusted Performance represents past performance of a hypothetical policy with an initial specified amount of $263,113 for a male and a female, both age 60, standard class, paying a single premium of $70,000. Performance results assume that the policy was purchased at the beginning of the period shown and that there were no partial surrenders, loans, or other premiums during the period.

Performance is calculated from the Adoption Date and reflects the deduction of a surrender charge and all charges and deductions. If deducted, these charges would significantly reduce the performance results.

Performance numbers are based on values provided by the portfolio management companies and are believed to be accurate; however, Genworth Life & Annuity cannot independently verify them.

See your registered representative for a personalized illustration showing all current guaranteed charges based on hypothetical performance.

Unadjusted Performance
VL Separate Account 1 average annual compounded total return figures are calculated as of the end of the periods shown and assume that the Separate Account had been in existence and a policy had been in force during the periods shown.

Total return represents percentage change in unit value price after deducting mortality and expense charge and administrative expenses. It does not reflect the other charges and deductions or surrender charges. If these charges were deducted, performance would be significantly lower.

Adoption Date
The Adoption Date is the date the underlying portfolio became available in VL Separate Account 1.

Portfolio Inception Date
Portfolio Inception Date is the date the Securities and Exchange Commission (SEC) declared the underlying portfolio effective. Portfolio Inception returns are calculated from the portfolio Inception Date and not from the Adoption Date.

Explanation of Symbols
"NA" indicates that the performance for the period shown is not available. If a portfolio has not been available for the period shown, total return for the period it has been available, if any, is shown in the "Since Inception" and "Since Adoption" columns. The returns for subaccounts with a 12b-1 fee, noted in the tables with the symbol "**§**", may reflect the historical performance of a different class of the underlying portfolio. For time periods before the portfolio's adoption of the rule 12b-1 plan, performance is restated based on the portfolio's 12b-1 fee.
